

CSOB Fuel Vent Protector PIREP

By Debonair Owner Adam Y.

It is dirt dauber season here in North Texas, which means lots of these:

Building these:

... everywhere they can, including interior spaces, engine area, and fuel vents. I put together a cheap and cheerful solution for the fuel vents.

- Collection of pipe cleaners (huge bag at Hobby Lobby for \$1.99)
- Remove Before Flight keychains (the cheap ones from Aircraft Spruce)

I believe it is pretty self-explanatory so here are some pictures. Snip em down to 4-6" in length so that they fit snugly. I chose this instead of plugs or caps because on the off chance one got left, I believe air would continue to flow through the little hairs. I am not going to test it however – I got bright red.

And that's it – a little piece of mind for not much time or money!
