REWORK INSTRUCTIONS

1. Locate and cut opening in lower, left wing skin. Install 3/32"-16 UNC double nuts (Model 33 only).

3. Drill 0.25" dia. hole in wing skin. Holes should be equidistant from the front edge of the tube. Use a #38 drill bit and locate the holes using the existing wing skin cutout. The position of the holes should be marked on the wing skin for future reference. When possible, install switch plate in wing skin as shown in the diagram.
